# Grid- template- rows repeat( 6 1fr)

resizing function (any standalone value used to define grid format rows or grid format columns), if defined. Otherwise, as its minimum track resizing function, and takes into account the grid gap. If a number of repetitions will be overflowing, then the return is 1. Otherwise, if the grid container has a distinct minimum size on the relevant axis, the number of returns is the smallest possible integer that fulfills this minimum requirement. Otherwise, the specified trace list is repeated only once. AutoFit behaves like autofill, except that after you place grid items, all repeating tracks are empty and contracted. An empty band is a strip with no flow grid items located inside or spreading across it. (As a result, all tracks crash, if all are empty.) A collapsed track is treated as having one fixed 0px resizing function, and the gutters on either side of its contraction collapse. To find the number of tracks that are automatically repeated, the user agent places the route size for a specified user agent with a value (for example, 1px), to avoid dividing by zero. Examples of specifying grid columns using repeating HTML() &lt;div id=container&gt;&lt;div&gt; This item is 50 pixels wide. &lt;/div&gt;&lt;div&gt; Item with flexible width. &lt;/div&gt;&lt;div&gt; Item with flexible width. &lt;/div&gt;&lt;/div&gt; CSS #container { View: Grid; Grid-Pattern-Columns: Repeating(2, 50px 1fr) 100px; Grid-Gap: 5px; Size box: Border-box; Height: 200px; Width: 100%; Color background: #8cffaa; Padding: 10px; } #container &gt; div { Color background: #c8a0ff; Padding: 5px; } Browser compatibility data specifications Update compatibility on GitHubDesktopMobileChromeEdgeFirefoxInternet ExplorerOperaSafariAndroid webviewChrome for AndroidFirefox for AndroidOpera for AndroidSafari in iOSSamsung Internetrepeat()Chrome Full Support 57 Full Support 57 Full Support 38 Enabled version 38: This feature is behind the preference of experimental web platform features enabled.
